

DVR/NVR Family Brochure

Smart Solutions for Complex Security Projects

AVer's wide range of complete surveillance solutions provides users with a variety of specifications and software support to accommodate the demands of most security projects. AVer's leading hybrid technology gives users the flexibility to support both megapixel IP cameras and analog cameras using the same DVR. This cost-effective approach allows for IP camera installation in critical areas and use of analog cameras in less critical areas or areas with extensive analog infrastructures already in place. Users in search of a pure network solution can match AVer's array of megapixel IP cameras with our embedded NVRs, like the powerful, cost-saving Linux-based E5016. Rounding out AVer's smart security solutions is its advanced DVR/NVR software which ensures a friendly user experience and easy management of events through video footage clustering.

Plug and Play

This exclusive feature makes installation as easy as possible. Simply connect AVer IP cameras with an AVer DVR/NVR and then sit back and watch as each IP camera is automatically detected and connected to the DVR or NVR. Have your system up and running in no time.

Intelligent Streaming

Through this unique feature of the AVer total surveillance solution, users can optimize remote and local monitoring by selecting compression types, frame rates and quality for specific streams, achieving excellent image performance, especially during multi-channel preview.

Simplified Camera Settings

Users can individually adjust the video size and frame rate for every connected analog camera plus easily setup attached IP cameras through friendly features like hassle-free protocol searching for most major IP camera brands.

Advanced Alarm Settings

AVer's extensive real-time alarming conditions, such as motion detection and abnormal events, are easily set to trigger specific actions to address the situation, such as activating warning sirens, sending alarm notifications to the central management system (CMS), or launching an E-map or a specified camera image to draw the user's attention.

Next-generation full HD IP surveillance solution

Reliable performance · optimized bandwidth & storage · easy setup

The seamless integration between AVer IP cameras, DVRs/NVRs and central management software (CMS) not only provides reliability and enhanced performance but also guarantees easy setup thanks to the standardized user interface across all devices. Clever functions like Smart Stream and ROI create an optimized solution for bandwidth and storage efficiency. And, with regularly scheduled feature and performance upgrades, expect your AVer IP surveillance solution to actually get better with age, allowing you to save more on bandwidth and storage investment.

- Full line of AVer IP cameras
- E -series DVRs/NVRs
- Central management software CM5000

SDKs

Unified Software Development Kits available for AVer IP cameras and AVer DVRs/NVRs make it much easier to integrate AVer solution components with any of external systems. SDKs can significantly speed up customization process, saving your time and efforts.

CM5000 CMS

The all-new CM5000 central management software (CMS) is designed for remote management of AVer's next generation of DVRs/NVRs. Users can leverage CM5000 to remotely control E-series DVRs/NVRs, including support for live preview, instant playback, settings adjustment, and E-maps. Full GUI standardization between local (DVR/NVR) and remote (CMS) sites ensures a low learning curve and smooth everyday operation.

Integrated Setup with Standardized UI

With the complete integration between AVer IP cameras, E-series DVRs/NVRs, and CM5000, all camera settings, including not only the basic ones like IP address, but also camera-embedded advanced options like ROI, Smart Stream, motion detection or motorized focus/zoom (MFZ), can now be set directly via DVRs /NVRs and CMS interface.

Central Management Software (CMS) - CM3000 & CM3000 Gold

- Onnect and control up to 1000 AVer DVRs, NVRs, and/or VMS
- Quad monitor support
- Supports up to 64 E-maps or Google maps to integrate and display incident alerts and live video
- Remote playback and backup for reviewing recorded video and retrieving critical images
- Advanced alarm center with multiple operator management
- Remote iAlarm for monitoring live alarm events and assigning them to remote managers
- Remote iMatrix for grouping up to 128 monitor views into myriad combinations to create a TV-wall command center
- Remote Setup for remote configuration of cameras, recordings, schedules and alarms

Mobile Control and Access

- Support for iPad, iPhone, Android phone and tablet
- Single or multi-channel live monitoring anytime and anywhere
- Savable profiles for fast connection during future use
- Remote PTZ camera control
- Remote download and playback of selected video footage

Video Intelligence

Missing object :

Alarm triggered when defined objects are removed from monitored zones, such as a painting taken off the wall at a museum or art gallery

- Suspicious object :
 - Alarm triggered when objects are left alone for an extended period of time, such as baggage left unattended at an airport or railway station
- Scene change :

the local and the remote

- Alarm triggered when there is an attempt to reposition or obstruct a monitoring camera, such as a vandal spray painting over the camera lens
- Visual search:
 Easily search by days, hours, minutes, and even seconds for recorded data on a selected channel
- PTZ tracking :
 Zoom in/out, focus, autopan, track moving objects and more from both

POS Integration

- Full compatibility with popular POS systems
- Easy management through the real-time POS data overlay on live video display
- Integrated confidential keyword filter for protection against employee tampering
- Use POS keywords to trigger notifications
- Adjust POS text location and font colors during video playback
- Search transaction data and playback video directly from the live monitoring screen through the advanced iPOS function (IWH / NV series)
